"TECHNICAL ANALYSIS FOR EVERYONE"

MICHAEL KAHN
RESEARCH LLC

May 30, 2014 - The market is back to another day another record and now the Nasdaq has breached resistance. It is not quite a record but it is the highest level in nearly two months. Small caps remain well behind but the Russell is still holding on to a gap up and marginal cross above its 50-day average.

The bottom line is that the market is pushing higher despite the warnings and again we have to reluctantly follow along. Low **VIX**, low volume (really low), low seasonal support and low (really no) leadership from the "proper" sectors all don't matter - until they do.

Headlines on our favorite market news sites changes daily, too. "Reasons for the rally" followed by "prepare for the correction" to "summer melt-up followed by a big correction" appear daily, contradicting the headline from the day before (see Index Charts of the Day for more). Is it any wonder that the American Association of Individual Investor survey shows a record number of neutral votes? They are not bulls and they are not bears. They just don't know.

The hourly **SPY** chart shows the breakout from a triangle yesterday and a new high. It also shows a lower RSI peak as we might expect this many days into a rally. The bottom line is that the trend is up but the market could use a cooling off period.

There is something to note from overseas. Several of the smaller Asian markets look to be in the process of breaking down. Philippines, Korea and Indonesia are having their issues on the charts, which is a change from the previous condition of flat domestic markets and rising Asian and European markets.

Elsewhere, bonds backed down a bit. Gold dropped some more but gold stocks ended in the green so it cannot be all bad in metals-land. Check out which sectors are leading the US - natural resources - below.

Index Charts of the Day

The S&P 500 broke out from a sloppy trading range and volume remains below average. Oh wait, this chart ends in May 2011. See next chart...

Here is the current chart. What happened in 2011 was a peak and then more sloppy trading range ending in an August plunge. Will it happen? It is possible thanks to all the indicator issues we've cited.

The Russell is holding its breakout but not advancing. It has to capitalize on its upside breakaway gap soon or else the odds of a hard downside reversal go up.

The Radar Screen

This is a list of potential opportunities, not a recommended portfolio. Underlined text is a change from previous report and if important it will be highlighted in yellow. We do not take "buy/sell on close" triggers or "at the open" triggers if the stock moves more than 4-5%. See <http://quicktakespro.com/radar.html> for all Radar Screen rules and terms.

Any position that moves in the desired direction and then reverses by 5% from the extreme that day is an automatic stop out. This is to compensate for the inability of this once per day newsletter to alert subscribers to the reversal.
